SUPPORTING WITH LOVE

## MEDICAL ALERT CARD

PLEASE SEE BOTH SIDES OF THIS CARD FOR IMPORTANT INFORMATION REGARDING MY PRE-EXISTING CONDITION.

**I have a disease known as **Lewy Body Dementia (LBD)**.** I may show signs of CONFUSION, DIFFICULTY UNDERSTANDING/RESPONDING TO QUESTIONS, OR MAY ACT IN AN AGGRESSIVE MANNER. Other symptoms may be VISUAL HALLUCINATIONS or MISIDENTIFYING PEOPLE.

**VERY IMPORTANT:** AVOID ADMINISTERING TRADITIONAL ANTIPSYCHOTIC MEDICATIONS, i.e. Haloperidol (Haldol) and ANTIEMETIC DRUGS, i.e., Prochlorperazine (Compazine) since treatment with these and certain antipsychotic medications may contribute to SEVERE, IRREVERSIBLE CONDITIONS. ADVERSE REACTIONS MAY ALSO BE EXPERIENCED BY MEDICATIONS THAT AFFECT THE BRAIN, i.e., Valium, Benadryl, Ambien, as well as some bladder-control drugs.

This card has been printed to bring awareness of the symptoms and sensitivity to medications that people with LBD may experience. Each individual is different. The best professionals to consult are knowledgeable neurologists, geriatricians, and geriatric psychiatrists.

**MEDICAL ALERT CARD**

PLEASE SEE BOTH SIDES OF THIS CARD FOR  
IMPORTANT INFORMATION REGARDING MY PRE-  
EXISTING CONDITION.

**PLEASE CONTACT MY FAMILY AND PHYSICIAN  
IMMEDIATELY**
